#1 Generative AI-based Test Automation Tool

With testRigor, you can use free-flowing plain English to build test automation. testRigor will understand and execute your instructions exactly as written. The way testRigor operates is by translating high-level instructions like `purchase a Kindle` into a more specific set of steps such as:

```
enter "Kindle" into "Search"
press enter
click "Kindle"
click "Add to cart"
```

You always have the ability to correct these instructions and expand upon them using supported commands found [here](#). See how it works [here](#).
